Welcome to sdnog wiki!

This wiki is your comprehensive resource for all things related to sdnog. Here, we aim to document our activities, provide technical resources, and share essential administrative and logistical information to support our community of network operators and engineers.

Explore our pages for detailed information about the past and upcoming sdnog events, technical documentation, and guidelines that facilitate our collaborative efforts. Whether you're looking for information on networking best practices or logistics for our meetings, you'll find it here.

If you have any ideas or comments for us, we'd love to hear from you! Please reach out at support@sdnog.sd.

Administrivia

about sdnog

sdnog is a non-profit organisation that provide an open forum to be used by any interested member from the Internet Community in Sudan to exchange technical information and expertise in networking. sdnog is managed and organised by a group of volunteers with the aim of capacity building and technology development within Sudan.

Mission

Provision of open platform for knowledge exchange, capacity building and technical collaboration.

Objectives

- To bring together the region's network engineers in a functional technical community
- To provide an opportunity for the exchange of information among network operators, engineers, researchers and other professionals close to the network community.
- To enhance the quality of Internet services available in Sudan by exchanging of technical ideas and information between different companies and organizations.
- To provide Network education, Capacity building and knowledge transfer
- Promotion of the use of open source with technical community.

Contact Information

sdnog is run by a group of volunteers. While we try our best to be easily reachable, there may be times when we're otherwise occupied; please accept our heartfelt apologies for that. For generic requests, you can send mail to: {info@sdnog.sd}.

Our postal address is:

E-mail: info@sdnog.sd

Telephone: +249-157898600

Fax: +249-157898500

Banking Information

Unfortunately, we have not yet managed to obtain banking details for SDNOG. It is on our to-do list to ensure this happens.

Logos and Logo Usage

sdnog has a fairly liberal logo usage policy.

Please see our [Logo Usage](#) page for more information on our different logos, and when and how to use these

sdnog Community

sdnog started as an idea between Sara Alamin and Hiba Abbas, to create an environment where the technical people in Sudan could co-ordinate, and communicate amongst themselves. Both Sara and Hiba had been participants at other NOG events, and had admired the spirit of participation amongst the technical community, and felt that this was missing in Sudan, and that they could do something to help fix and improve that.

While the idea grew from discussions between them, today sdnog belongs to the Internet community in Sudan. It's made up of participants from the private sector, government and regulatory sectors, educational sectors, as well as many international participants, all working to further the SdNOG goal's of improved communication amongst the Sudanese technical community, both inside, and outside Sudan.

sdnog is divided into two functional units:

- Activities Team: Responsible for organizing all sdnog events, writing reports, and performing the technical work necessary to keep the sdnog infrastructure operational.
- Volunteers: Community members who are interested in assisting with logistics and the organizing process during events.

And, of course, the community, which is largely the good people on our [mailing lists](#) ☐☐

sdnog Story

How to setup local Network Operator Group

sdnog team highlight the best practices and steps to establish a local Network Operator Group (NOG) from the first idea to planning and holding the first event, based on the experience of establishing SdNOG; The Sudan Network Operator Group. To begin planning for establishing your local NOG, ask yourself the following questions

- Why do you need a local NOG?
- What are the vision, mission and objectives of the group?
- What will be the activities of the group?
- How can you meet these goals?

Answering these questions successfully will give you a clear action plan on how to establish your local NOG.

The following document demonstrate the required steps, [Establishing Local NOG SdNOG Experience](#)

Special Thanks for Samir S. Omer who did a great work to write this document.

sdnog sponsorship opportunity

sdnog forms an excellent platform for experts and people interested in networking and ICT to come together, to discuss related issues and suggest better ways for Internet governance and network management. Sponsoring sdnog activities will give you the opportunity to meet the central people who effect the ICT sector, and will develop your social network and reveal potential opportunities. Moreover, it is a perfect opportunity to increase the visibility of your company, as a promoter of ICT in Sudan. In addition, helping such activities will enhance the knowledge level countrywide and thus improve quality of the employment market.

if you interested please check our [sponsorship benefits sheet](#)

UNIX/Linux, Networking and DNS Online Course: Participants' Feedback

Your valuable feedback will assist us in our continuing effort to provide the best possible always .

Abd alazeim
Software engineer

First of all, I am so grateful for giving me the opportunity through this course. It was wonderful to be part of the group, it was over exceptions of any online course. Having practical objects was surprised me, for my point of view it is only for another courses not online ones. I am really appreciated you letting me chosen. Very good contents, great practice and astonishing teacher. Thank you very much.

March 2019

Salam,,,

I really enjoyed the course. It gives solid understanding about the DNS and a good knowledge about mail system and at the end of the course you will be able to configure postfix and you will monitor your system services as well as I encourage you to go through all the course and I will guarantee that you will have a strong understanding of the

Before enrolling this course I was thinking that the internet is just a web pages loaded from a servers that just serv
I say thanks SDNOG and ISOC and I hope that I join you in the future

Ammar Mohammed
Computer Science Student
Group 03

It was a fabulous course. Cause it presented by SdNOG team.
I learnt how to establish DNS server, Mail System and how to secure it, and monitoring servers using NAGIOS. All c
I'm very thankful to all the mentors and colleagues in the group. May Allah reward you.
Enrol in this course; you'll be satisfied with the many knowledge you'll gain.

AbdulRahman B. Hussain
Software Developer
Group 03

As it is the usual, SdNOG provided us a well prepared dose of knowledge with a very helpful group of mentors who

My kind wishes for success to all.

Mohamedelfatih Elamin
NOC Support
Group 03

I can't thank SDNog and ISOC enough for this course, the knowledge and lab assignments was perfectly reflected to
And helped me to better understand network services and operations.

The group was very active and collaborative and everyone is willing to help.

My recommendation is to take this course and every other course offered by SDNog, and try to participate in the c
