

Shift-Left AppSec CI/CD Pipeline

This introductory workshop provides a practical foundation in Application Security (AppSec) and demonstrates how to integrate security early in the software development lifecycle using a shift-left approach. Designed for beginners, the session covers essential terminology, key concepts in DevSecOps, and enforcement methods that help maintain secure and high-quality code. The workshop concludes with a hands-on demo of an AppSec-enabled CI/CD pipeline.

Instructor

Omar Aladdin

What You Will Learn

- Types of Application Security Assessments
- Terminologies of AppSec
- What is DevSecOps
- Enforcement Techniques in DevSecOps (Quality Gates)
- Challenges of DevSecOps
- Hands-On Demo - a Shift-Left AppSec CI/CD Pipeline

Who Should Attend

Developers, DevOps engineers, junior security engineers, and anyone new to AppSec or DevSecOps who wants a practical introduction to securing applications early in the development lifecycle.

Outcome

Participants will leave with a solid understanding of basic AppSec concepts, how DevSecOps improves security, and how to implement a simple shift-left AppSec pipeline.
